

Movimento Puma™ Config

Puma Config is an application for configuration of the Movimento Puma hardware and management of its stand-alone functionalities as well as conversion of log files.

Configuration

The real-time clock and WLAN configuration are set by Puma Config. It is also possible to update the Puma's firmware.

File Explorer

The Explorer tool is used to upload and download files from the Puma's internal memory or SD-card.

E-script Editor

The Puma 2 is able to act as a stand alone device powered by E-script applications. The E-script Editor assists the user to create and edit fully customizable E-script applications such as software download and node simulation. It is possible to edit automatically generated E-scripts to customize the functionality of the application.

Logger Wizard

The logger wizard automatically creates E-scripts for logging. Creation of logger applications are automatically generated without writing any code, making it quick and easy to start logging. The generated E-script can be customized in the Editor to fully fit the logging purpose.

Log File Converter

Recorded log files are easy to convert into a wide range of industry standard file formats.

Free or Licensed?

The Puma Config application is available in two version with different component access.
